

AI Walkway Detection OJT Program

Objective

To develop participants' knowledge and practical skills in AI Computer Vision by learning how to build a CCTV-based human detection system using Python and YOLO, including walkway violation detection, alert notification, data logging, and dashboard visualization.

The program aims to enable participants to successfully develop an AI Walkway Detection prototype and apply the acquired knowledge to future safety-related AI use cases.

Project Scope

Item	Scope
AI Model	Human Detection (YOLO Pre-trained Model)
CCTV	1 Camera (at least)
Detection Area	Walkway 1 Area (at least)
Alert	Email / Teams
Storage	SQL Database (Express) & Shared Drive
Dashboard	Power BI

OJT Roadmap

- 2 CCTV Integration
- 3 YOLO Human Detection
- 4 Walkway Detection
- 5 Alert Notification
- 6 Database Management
- 7 Power BI Dashboard
- 8 UAT & Optimization
